

Assign, change, or remove permissions on Active Directory objects or attributes

To assign, change, or remove permissions on Active Directory objects or attributes

1. Open Active Directory Users and Computers.
2. On the **View** menu, select **Advanced Features**.
3. Right-click the object for which you want to assign, change, or remove permissions, and then click **Properties**.
4. On the **Security** tab, click **Advanced** to view all of the permission entries that exist for the object.
5. Do one or more of the following:
 - To assign new permissions on an object or attribute, click **Add**. Type the name of the group, computer, or user that you want to add, and then click **OK**. In the **Permission Entry for ObjectName** dialog box, on the **Object** and **Properties** tabs, select or clear the **Allow** or **Deny** check boxes, as appropriate.
 - To change existing permissions on an object or attribute, click a permission entry, and then click **Edit**. On the **Object** and **Properties** tabs, select or clear the **Allow** or **Deny** check boxes, as appropriate.
 - To remove existing permissions from an object or attribute, click a permission entry, and then click **Remove**.
