## Delegating Custom Tasks

1. Open the Active Directory Users And Computers administrative tool.

2. Right-click the Corporate OU within the North America OU and select Delegate Control. This starts the Delegation of Control Wizard. Click Next to begin making security settings.

3. In the Users Or Groups page, click the Add button. In the Enter The Object Names To Select field, enter **Server Operators** and press Enter. Click Next to continue.

4. In the Tasks To Delegate page, select the Create A Custom Task To Delegate radio button, and click Next to continue.

5. In the Active Directory Object Type page, choose Only The Following Objects In The Folder, and place a check mark next to the following items (you will have to scroll down to see them all):

   User Objects

   Computer Objects

   Contact Objects

Group Objects

Organizational Unit Objects

Printer Objects

Click Next to continue.
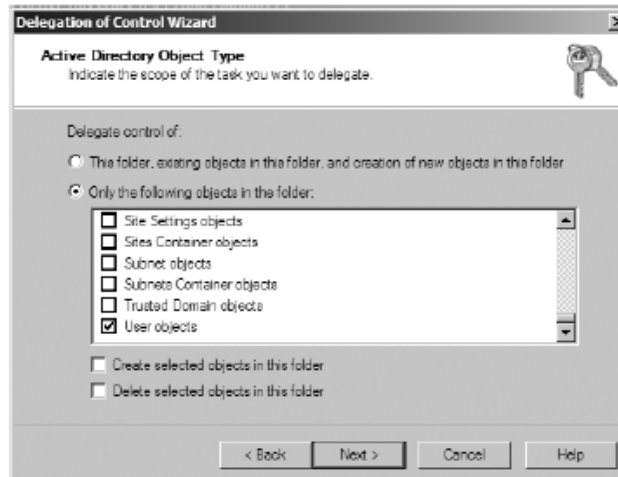

6. In the Permissions page, place a check mark next to the General option and make sure the other options are not checked. Note that if the various objects within your Active Directory schema had property-specific settings, you would see those options here. Place a check mark next to the following items:

Create All Child Objects

Read All Properties

Write All Properties

This gives the members of the Server Operators group the ability to create new objects within the Corporate OU and the permissions to read and write all properties for these objects. Click Next to continue.
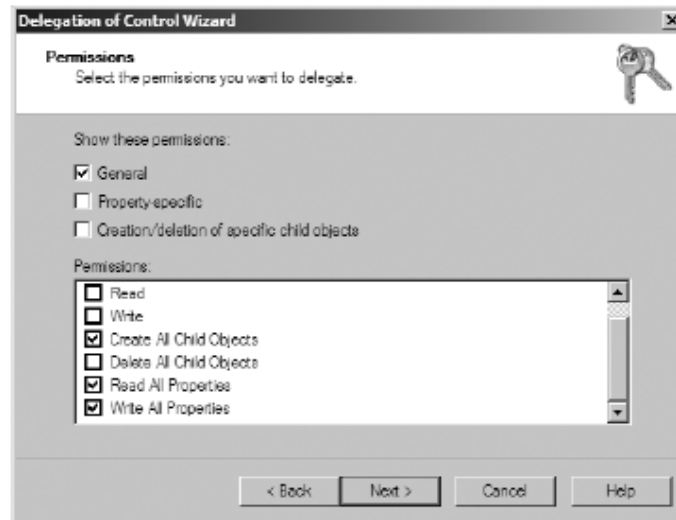

7. Click Next to continue.

8. The Completing The Delegation of Control Wizard page provides a summary of the operations you have selected. To implement the changes, click Finish.
