TESTSERVER (DocShare) Properties

General Replicated Folder Staging Advanced

The staging folder acts as a queue for changes that will be replicated to receiving members.

Staging path:
F:\DocShare\DfsrPrivate\Staging

Quota (in megabytes):
4096

Staging folder

To size the staging folder quota large enough to prevent replication from slowing or stopping, you must take into account the size of the files to be replicated. For more information, see the [staging folder optimization guidance](#).

Conflicted and deleted folders

The screenshot shows the Windows DFS Management console. The left pane shows the hierarchy: DFS Management > Namespaces > Replication > Domain System Volume > Repgroup1. The main pane shows the 'Repgroup1' properties, with the 'Replicated Folders' tab selected. It displays a table of 3 entries for the 'Staging Quota: 4.00 GB (3 items)'. The selected entry is for 'TESTSERVER' with a local path of 'F:\DocShare' and a staging quota of 4.00 GB. A 'TESTSERVER (DocShare) Properties' dialog box is open, showing the 'Advanced' tab. The 'Conflict and Deleted path' is set to 'F:\DocShare\DfsrPrivate\ConflictAndDeleted' and the 'Quota (in megabytes)' is set to 4096. The checkbox 'Move deleted files to Conflict and Deleted folder' is checked. The right pane shows the 'Actions' menu for 'Repgroup1' and 'TESTSERVER (DocShare)', including options like 'New Member...', 'Delete', and 'Refresh'.
