Results

This wizard helps you install roles, role services, or features. You determine which roles, role services, or features to install based on the computing needs of your organization, such as sharing documents, or hosting a website.

To remove roles, role services, or features:

[Start the Remove Roles and Features Wizard](#)

Before you continue, verify that the following tasks have been completed:

- The Administrator account has a strong password
- Network settings, such as static IP addresses, are configured
- The most current security updates from Windows Update are installed

If you must verify that any of the preceding prerequisites have been completed, close the wizard, complete the steps, and then run the wizard again.

To continue, click Next.

Results

Select the installation type. You can install roles and features on a running physical computer or virtual machine, or on an offline virtual hard disk (VHD).

 **Role-based or feature-based installation**

Configure a single server by adding roles, role services, and features.

 **Remote Desktop Services installation**

Install required role services for Virtual Desktop Infrastructure (VDI) to create a virtual machine-based or session-based desktop deployment.

Copy package to USB stick. The USBs tick will contain the package to be installed on Server 2003 since 2003 does not come with Server Migration tools. Once complete I will change to Windows server 2003 to perform the Migration.

# Install server migration tools

This command registers Windows Server Deployment Tools in the local operating system. Once this is completed powershell with open with Windows Migration Tools Ready to go.

Windows server migration tools can also be run from the start ment.

```
Windows PowerShell
Windows PowerShell
Copyright (C) 2006 Microsoft Corporation. All rights reserved.

PS C:\Documents and Settings\Administrator\ITFREETRAINING> cd \
PS C:\> Add-PSSnapin Microsoft.Windows.ServerManager.Migration
PS C:\>
```

This command will register Windows server migration tools in powershell

In order to see which roles can be exported run the command

```
PS C:\> Get-SmigServerFeature
```

WindowsFeatureName	ID	Installed
Remote Access Service	NPAS-RRAS	True
DHCP Server	DHCP	True

```
PS C:\> _
```

## Command to export DHCP SETTINGS

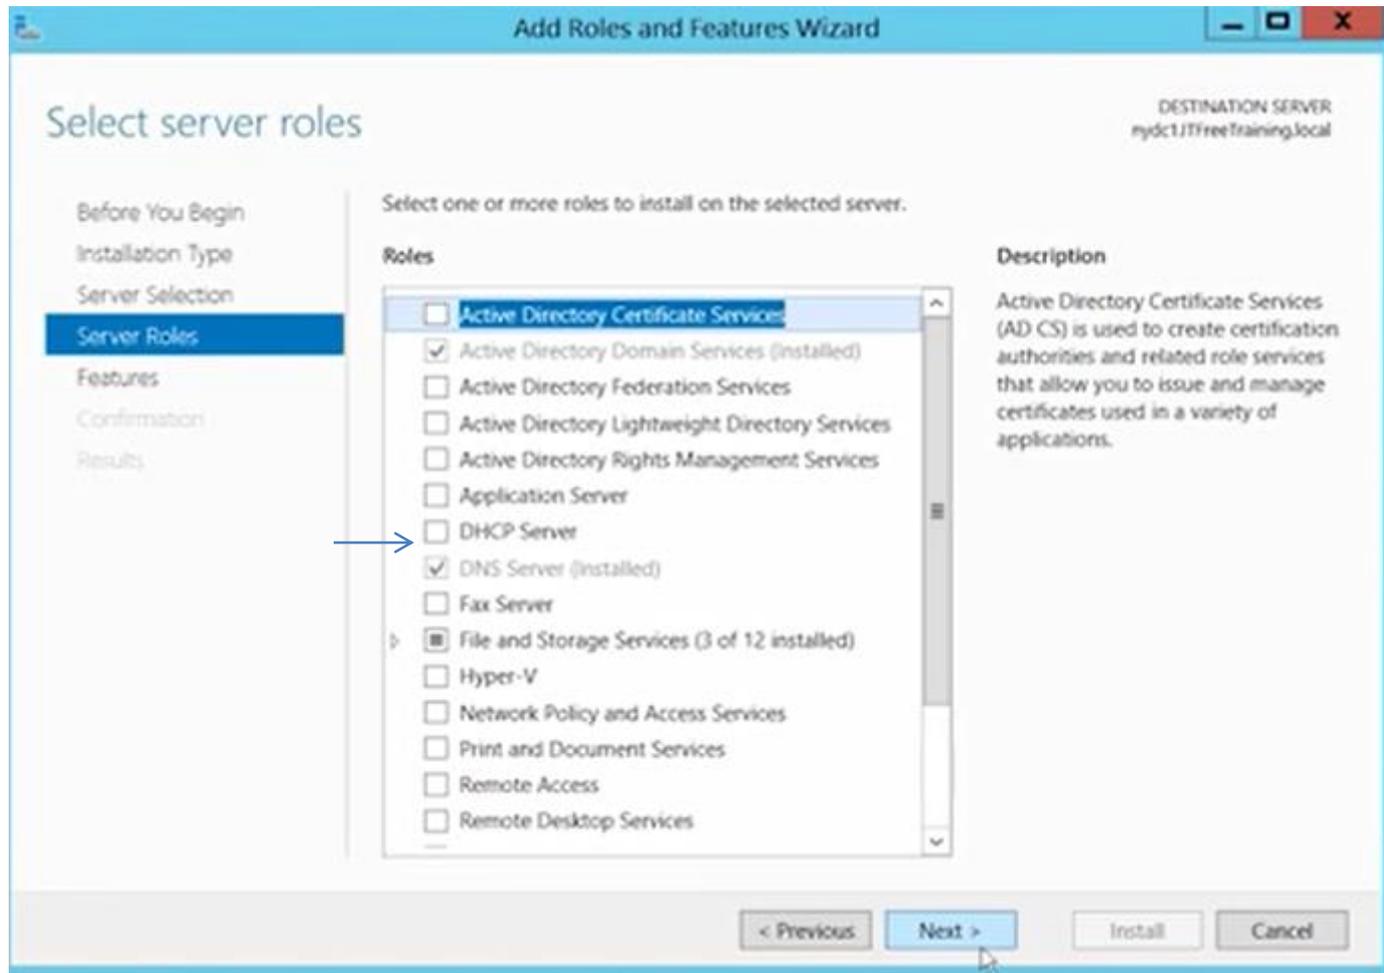

```
PS C:\> Export-SmigServerSetting -FeatureID DHCP -Path c:\temp\store -Verbose
cmdlet Export-SmigServerSetting at command pipeline position 1
Supply values for the following parameters:
Password: xxxxxxxxxx

        ItemType ID                               Success DetailsList
        ----- --                               -
        WindowsFeature DHCP                       True ()

PS C:\> _
```

COPY THE DATA that is exported to the USB DRIVE

I NEED TO GO TO MY SERVER 2012R AND INSTALL THE DHCP ROLE

Manage Services >

None of the options have been configured. We now have to import the DHCP SETTINGS From the other DHCP server.

Before you can import the DHCP SETTING you need to stop the DHCP service, then Run the command to import the settings

```
Administrator: Windows Server Migration Tools
Windows PowerShell
Copyright (C) 2013 Microsoft Corporation. All rights reserved.

PS C:\Windows\system32> cd \
PS C:\> Net Stop "DHCP Server"
The DHCP Server service is stopping.
The DHCP Server service was stopped successfully.

PS C:\> Import-SmigServerSetting -FeatureID DHCP -Path c:\store\store -Force_
cmdlet Import-SmigServerSetting at command pipeline position 1
Supply values for the following parameters:
Password: ****
```

```

      ItemType ID                               Success DetailsList
      ----- --                               -
WindowsFeature DHCP                            True ()

PS C:\>

PS C:\> Net Start "DHCP Server"
```
